

# Kid's - passenger harness for children

Kid's is a smaller edition of our big harnesses and is made for all pilots, who want to go tandem paragliding with their child. The passenger harness for kids comes up with all features, pilots expect from a good harness.

## Conception

The children passenger harness has a protector, drop-out safeguard and special child-proof locks in order to prevent the locks being opened during flight. Material, belt layout and sewings are identic to our large passenger harnesses.

## Features

- Geometry appropriate for children
- Back protector
- Plug locks, in order to prevent from being opened accidentally
- Honeycomb seat board

## Technical data

Size	Kids M	Kids L
body height		> 120 cm
max. load	50 kg	50 kg
harness weight	1,7 kg	1,8 kg
suspension height	36 cm	38 cm
seat board size (width/length)	26 cm x 26 cm	28 cm x 28 cm
certification	-	-

	Material
fabric	Ripstop Nylon 210 & Cordura
carrying straps	25 mm Polyester
leg and breast closures	Finsterwalder PT – Lock
carabiner	Finsterwalder Snap Lock

## Questions & answers

Is the child passenger harness certified?

Unfortunately it isn't! Certification for such small sizes is not possible, as there are no test dummies

available for little harnesses like Kid's. Certification standards just aren't destined for child sizes.

**But:** the whole harness is, from belts to sewings, **exactly** designed and manufactured **like our large** certified passenger harness.

If my child happens to play around with locks during flight, can they be opened?

No! We deliberately didn't use automatic belt locks. The locks we use, particularly the chest belt lock, can not be opened during flight, due to a drop-out safeguard.

There are two available sizes for Kid's. Which one shall I choose?

It is advisable, even if the child is smaller, to choose size L, as the adjustability provided makes it possible, to use it even for a small child. Even if the seat board is quite long, the seating is going to be appropriate for your child.
