

Reversible harness Looping

Looping is a low weight reversal harness, comfortable and fully-fledged. The large rucksack has enough capacity for the whole equipment. Little extras optimise the storage capacity of the rucksack.

Conception

Looping is a comfortable and sportive reversal harness made for casual pilots as well as cross-country pilots. It is easily reversible from harness to rucksack and vice versa in only a few steps. Despite its low weight of only 3,6kg, Looping has a well-cushioned back part with integrated reinforcements, which ideally support the pilot's back.

Features

- Excellent seating comfort
- Integrated rescue parachute container
- Deployment bag with release handle
- Colour-coordinated leg and breast closures
- Large rucksack capacity
- Light-weight, formfitting honeycomb seat board
- Radio pocket integrated into shoulder belt
- Anatomically suitable hip-belt
- Rucksack has many attached straps to tie accessory (sticks, spurs etc.), as well as a net to carry a helmet
- Many small and large storage possibilities
- Magnet holder for speed bar
- Easily reversible

Technical data

Size	Medium	Large	X-large
body height	160 - 175 cm	170 - 185 cm	180 - 195 cm
max. load	120 kg	120 kg	120 kg
harness weight	3,4 kg	3,6 kg	3,8 kg
suspension height	46 cm	48 cm	48 cm
seat board size (width front/rear x length)	33/38 cm x 36 cm	33/38 cm x 36 cm	33/38 cm x 36 cm
certification	EN1651/LTF 91/09	EN1651/LTF 91/09	EN1651/LTF 91/09

The sizes given only are references, as the individually suitable size differs according to physique and personal preferences.

Material

fabric	Ripstop Nylon 210 & Cordura
carrying straps	25 mm Polyester
leg and breast closures	AustriAlpin Cobra
carabiner	Finsterwalder Snap Lock
idle pulley	AustriAlpin
seat board	synthetic; honeycomb design

Questions & answers

How large is the rucksack capacity of Looping?

The rucksack capacity of Looping is large enough to carry the whole equipment (paraglider, harness, clothes, etc.) and there is an integrated net to carry the helmet.

I would like to use Looping not only for hike & fly tours - is it a fully-fledged harness?

Yes, absolutely. Regarding comfort and flight characteristics Looping is a reversible harness, which absolutely keeps up with the attributes of common harnesses. It is comfortable, has an airbag protector and many useful well-thoughtout details.

Do I need to handle a reversible harness with more care than a common harness?

It needs to be handled slightly more careful, yes. As the rucksack of a reversible harness is at the same time part of the airbag protector, you should take care of it in order not to damage the airbag during transport (cableway, airport etc.). Therefore this part of Looping is two-layered in order to protect the airbag.

Can I integrate my rescue parachute into the provided deployment bag with release handle?

Yes. The deployment bag meets current LTF requirements, thus is compatible with all common rescue systems (annular and cruciform parachutes).

Does the airbag already have a protecting function during take-off run?

The airbag protector of Looping fills up very quickly, thus provides protection already during take-off run. In order to optimise that protection, you can pre-fill the airbag simply by shaking it up before take-off.
