

GrassHopper

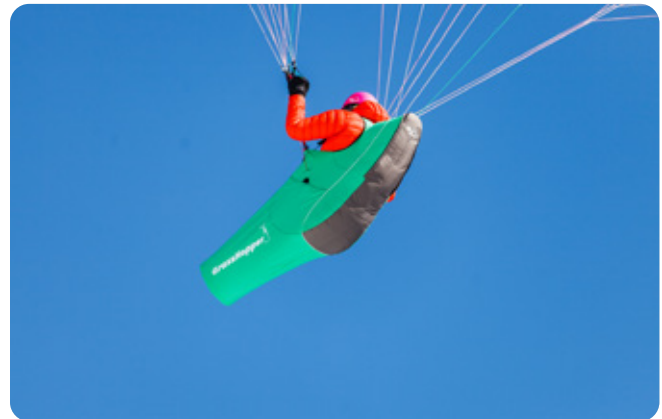

LC is proud to release its new pod harness: The GrassHopper
 Once more, LC innovates with a buckle less system to get strapped in.

A front mount container is integrated on the waist belt, the reserve risers are directly attached on it.

This system allows to get strapped in 2 steps only, reserve activation included, and reduce to almost zero the risk the take off unstrapped.

The reserve container is closed by 6 pins system, with a short-range of activation. This system reduces the risk of un-attempted reserve release

With a weight of 3.3kg for the L size, no sacrifices have been done on durability.

The seat is very easy to use thanks to its seating position. It offers a very good support along the chest hip and legs, as well as a great stability (ABS adjustable). This gives a perfect control on takeoff and landing (chest straps, shoulder straps, pod feet rest position and ABS sensivity).

This seat is certified according to EN 1651/EN 12491

Maximum AUW: 110kg

2 sizes:

- S/M : pilot < 177cm
- M/L : pilot > 175cm
